

Drive Controllers without Master Communication (Basic Devices)

Abbrev. Column →		1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	0			
Example:		D	K	C	1	0	.	3	-	0	0	4	-	3	-	M	G	P	-	0	1	V	R	S																				
1.	Product																																											
1.1	DKC..... = DKC																																											
2.	Line																																											
2.1	10..... = 10																																											
3.	Design																																											
3.1	3..... = 3																																											
4.	Rated current																																											
4.1	4 A..... = 004																																											
4.2	8 A..... = 008																																											
4.3	12 A..... = 012																																											
4.4	18 A..... = 018																																											
5.	DC-bus nominal voltage																																											
5.1	DC 300 V..... = 3																																											
6.	Firmware																																											
6.1	Multi interface general purpose..... = MGP																																											
7.	Firmware version																																											
7.1	e.g., 01..... = 01																																											
8.	Nature of the firmware																																											
8.1	Standard..... = V																																											
9.	Firmware release status (update) (00 to 99)																																											
9.1	Release status (the currently valid status = status of the items list delivered)..... = RS																																											

Illustration example: DKC10.3-XXX-3

Fig. 1-6: Type code for drive controllers without master communication (basic devices)
